**PREVENTS
RIM
CORROSION**

SIMONIZ sealtite[®] contains corrosion inhibitors which protect any type of metal found in tires, rims or valve stems.

**INCREASES
RETREADABILITY**

SIMONIZ sealtite[®] aids in maintaining the integrity of the casing by reducing the number of run-flat tires and by maintaining a constant pressure. SIMONIZ sealtite[®] is fully compatible with all methods and compositions used in the retread process.

When a retreaded tire is back in service, SIMONIZ sealtite[®] eliminates the possibility of air seeping between the casing and retread when punctured, by sealing where separation may begin.

no air loss minimizes sidewall flexing, maintaining the integrity of the casing
